PROJECT

Industrious Diamond
Website and Android Mobile Application

- The main aim of the Project is to let the user know the information about diamond trade such as diamond price, design and trade.
- In this Project (System), the Front-end is in HTML (Hypertext Markup Language), CSS (Cascading Style Sheets), BOOTSTRAP and the Back-end is in PHP.
- Recommendations of diamond trade will be given to users based on diamond latest price, design, and market.
- The need to develop this Project is that people are still unaware of those Diamond trade. This website will update them about the latest diamond market.

FoodFinder
Android Mobile Application

- This system is used to find the different restaurants and provide ease to the customers to order favorable food-items from anywhere and at any time through the website or mobile application and enhance the services of the food industry and help them to grow their scope.
- FoodFinder system where the registered customer can order the food from the registered restaurants available and can get an easy door-step delivery.
